Clinicopathological Features of Eyelid Skin Tumors. A Retrospective Study of 5504 Cases and Review of Literature

Manuel Deprez, MD, PhD*† and Sylvie Uffer, MD, PhD*

predominant subtypes. However, clinicians and pathologists should be aware of the pitfalls that can affect both clinical and histological diagnosis. This is particularly important for sebaceous carcinoma presenting like inflammatory lesions and for hair follicle tumors mimicking basal cell carcinoma.

Merkel cell carcinoma frequently shows histologic features of basal cell carcinoma: a study of 30 cases

Immunohistochemical staining

Cam5.2	+	+
Ber-EP4	+	+
Neuron-specific enolase	+	+/−
Chromogranin A	+	+/−
Cytokeratin 20	+	−

Background: Merkel cell carcinoma (MCC) is a basaloid cutaneous neoplasm that may be mistaken for basal cell carcinoma (BCC).
Methods: Thirty MCCs were examined for areas that histologically resembled BCC.
Results: One of the histologic features of BCC (either a mucinous stroma or stromal artifactual retraction) was identified in all MCCs. A mucinous stroma was found in 28 MCCs (93%), stromal artifactual retraction in 27 (90%), mucin-containing gland-like spaces within

Cytokeratin Profile in Basal Cell Carcinoma

Elvio Alessi, MD,* Luigia Venegoni, BSc,* Daniele Fanoni, BSc,* and Emilio Berti, MD†

TABLE 2. Focal or Diffuse Expression for 12 CKs in Some BCC Subtypes

	CK											
	1	5	6	7	8	10	14	15	16	17	18	19
Superficial BCC	7/10*	10/10	0/10†	7/10	4/10	0/10	0/10	0/10	6/10¶	10/10	7/10	2/10
Nodular BCC	4/10*	10/10	2/10	2/10	7/10	0/10	0/10	0/10	4/10	10/10	8/10	2/10
Micronodular BCC	3/4*	4/4	1/4	3/4	2/4	0/4	1/4	0/4	2/4	4/4	3/4	1/4
Morpheiform BCC	0/2	2/2	0/2	0/2	1/2	0/2	0/2	0/2	0/2	2/2	1/2	0/2
Fibroepithelial BCC	5/5	5/5	0/5†	2/5‡	2/5	0/5	1/5§	0/5	1/5¶	5/5	4/5	2/5
Nodulocystic BCC	4/4	4/4	0/4	1/4	3/4	0/4	2/4	0/4	2/4	4/4	3/4	1/4
BCC with adnexal diff.	17/17	17/17	7/17†	15/17	14/17	0/17	3/17§	0/17	13/17¶	17/17	16/17	6/17

In conclusion, our study confirmed the suggested close relationship between BCC cells and hair follicle epithelial cells. It was in favor of tumor differentiation toward follicular outer root sheath cells and, in most cases, also toward the glandular components of the pilosebaceous–apocrine unit. It also showed that no significant difference in the CK profile among the BCC subtypes exists.

Tricoblastoma
Tricoepitelioma
Bcl-2 and CD10 expression in the differential diagnosis of trichoblastoma, basal cell carcinoma, and basal cell carcinoma with follicular differentiation

Resumen: "Ideas claves"

- **CCB vs TB**
  - CD10 (+ epitelio en CCB; + estroma en TB)
  - No sirve Bcl-2

- **Tum. Sebáceos**
  - BerEP4 negativos
  - Citoq 19 puede ser útil
  - La IHQ no resuelve el dd benigno-maligno
    - D2-40 y racemasa pueden ayudar

- **CCB metatípico**
  - BerEP4 positivo

Resumen: "Ideas claves"

- **Tumores esclerosantes**
  - Si BerEP4 es negativa no es un CCB
  - CAM: p63 patrón distintivo
  - Nuevos marcadores:
    - PHLDA1 (TEP, TEPd)
    - P75 NTR (TEPd)
    - PAF (CCBm)

- **Metástasis vs tumor 1º**
  - P63, D2-40 y citoq 15 +: tumor 1º
